

The SMTP server requires a secure connection or the client was not authenticated. if uploading on godaddy

below code is working fine in local, but if upload upload it on godaddy it is not working.

Error: showing

The SMTP server requires a secure connection or the client was not authenticated. The server response was: 5.5.1 Authentication Required. Learn more at

```

Line 53:
Line 54:         smtp.EnableSsl = true;
Line 55:         smtp.Send(message);
Line 56:
Line 57:

    MailMessage message = new MailMessage();
    message.From = new MailAddress(emailid.Text);

    message.To.Add(new MailAddress("receiver@gmail.com"));

    message.Subject = "NaatKhawan's Feedback";

    message.Body = "Selected: " + DropDownList1.Text.ToString() + "<br/><br/>Name: " +
    name.Text.ToString() + " <br/><br/>Email: " + emailid.Text.ToString() + " <br/>
    <br/>Contact Number: " + phone.Text.ToString() + " <br/><br/>Message:<br/> " +
    remabox.Text.ToString();

    message.IsBodyHtml = true;

    // finally send the email:
    SmtpClient smtp = new SmtpClient();
    smtp.Host = "smtp.gmail.com";

    smtp.Port = 587;
    smtp.Credentials = new System.Net.NetworkCredential("123@gmail.com", "123");

    smtp.EnableSsl = true;
    smtp.Send(message);
    lbltxt.Visible = true;
    name.Text = "";
    emailid.Text = "";
    phone.Text = "";
    remabox.Text = "";

    lbltxt.Text = "Thank you for supporting NaatKhawan";
  
```

c# asp.net email smtp-auth

4 What kind of link is that? What does it do? Do I need to run it on all computers I want to use my account on?

1 Look at [stackoverflow.com/questions/34851484/](https://stackoverflow.com/questions/34851484/)... – user5515846 Jan 20 '16 at 8:28

I have the same problem.

I have found this solution:

Google may block sign in attempts from some apps or devices that do not use modern security standards. Since these apps and devices are easier to break into, blocking them helps keep your account safer.

Some examples of apps that do not support the latest security standards include:

The Mail app on your iPhone or iPad with iOS 6 or below  
The Mail app on your Windows phone preceding the 8.1 release  
Some Desktop mail clients like Microsoft Outlook and Mozilla Thunderbird  
Therefore, you have to enable Less Secure Sign-In in your google account.

After sign into google account, go to:

<https://www.google.com/settings/security/lesssecureapps>

wow, thanks for this. Non of the other answers solved this issue for me. I feel this is recent change from Google and this answer should now be updated and accepted as "Answer". – AlexVPerl Apr 11 '15 at 7:39

Thanks Aidin.....saved me a lot of time. – Reza M.A Oct 4 '15 at 6:35

---

I just encountered the same problem.

Tried Aidin Eslami's answer and it only did part job:

After enabling less secure apps access in here:

<https://www.google.com/settings/security/lesssecureapps> I managed to send emails from my local machine but not from my web host.

And then I found this google support page:

<https://support.google.com/accounts/answer/6009563>

Still having trouble signing in?

If you've tried all the options above but are still unable to sign in to your account on the app, try the following:

Go to <https://accounts.google.com/DisplayUnlockCaptcha> on your device's browser. Enter your username and password, then type the letters on the screen. Go back to the app and try signing in again.

After pressing the button in the DisplayUnlockCaptcha everything works!

Hopes this helps others too. Good luck.

I also had this issue with sending email from my local application and tried many different suggestions.

After few hours of battling with this it turned out that the issue was related to the fact that I had 2 google accounts and I was using my second account and all setting were correct I even enabled lesssecureapps on this account but it still didn't work. Last thing I tried was to change the SmtpClient setup to use my other Gmail account and it all magically worked.
